29 "The class attribute is mostly used to point to a class in a style sheet. However, it can also be used by a JavaScript (via the HTML DOM) to make changes to HTML elements with a specified class." - w3schools.com/tags/att_standard_class.asp - Triynko Apr 7 2011 at 18:11

17 `element.setAttribute(name, value);` Replace `name` with `class`. Replace `value` with whatever name you have given the class, enclosed in quotes. This avoids needing to delete the current class and adding a different one. This [jsFiddle example](#) shows full working code. - Alan Wells May 18 2014 at 4:59

3 For changing a class of HTML element with onClick use this code: `<input type="button" onclick="addNewClass(this)" value="Create" />` and in javascript section: `function addNewClass(elem){ elem.className="newClass"; }` [Online](#) - Iman Bahrapour Aug 22 2017 at 4:13

@Triynko - that link on w3schools has changed, looks like in September 2012. Here is that page on Archive.org from 12/Sep/2012: [HTML class Attribute-w3schools](http://HTML_class_Attribute-w3schools). Here is the link for the replacement page on w3schools.com: [HTML class Attribute-w3schools](http://HTML_class_Attribute-w3schools). - Kevin Fegan Oct 12 2018 at 17:46

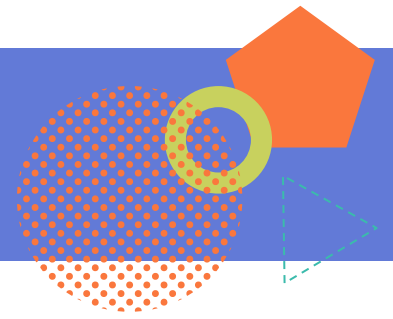

@ImanBahrapour That will obliterate any existing classes. - Teepeem Sep 17 2021 at 2:53

CLASS LIST

Podemos hacerlo utilizando `'classList'`, una funcionalidad que hoy en día la traen todos los navegadores modernos como Chrome, Firefox, Edge, etc.

¡FIN!
